RustDesk is a remote access and remote control software, allowing maintenance of computers and other devices.

Main Features

> ➢ Fully secure with end-to-end encryption
>
> ➢ Send or receive any files with ease
>
> ➢ Two ways to communicate with your remote partner by text chat
>
> ➢ The free program is very easy to use

Download RustDesk for a Windows computer

Log in to the user account you normally use.

RustDesk

Supported operating systems: Windows, macOS, Linux, (Android, iOS)

License: free open source

Download the program from: https://rustdesk.com/

Click on **DOWNLOAD** to start the download for newer Windows computers and save
1.1.9 7/8/10 64-bit (6MB)

the zip-file. By default the file is stored in the Download directory.

Install RustDesk on your Windows computer

Start the File Explorer by clicking the icon.   Go to the folder where the downloaded zip-file is stored and double click it.

Then double click on the rustdesk-exe file on the right side.

A new window is displayed. For easier use, the application needs to be installed first.

The installation enables RustDesk to work properly on your computer.

To start the installation, click on **Install**

Due to UAC, RustDesk can not work properly as the remote side in some cases. To avoid UAC, please click the button below to install RustDesk to the system.
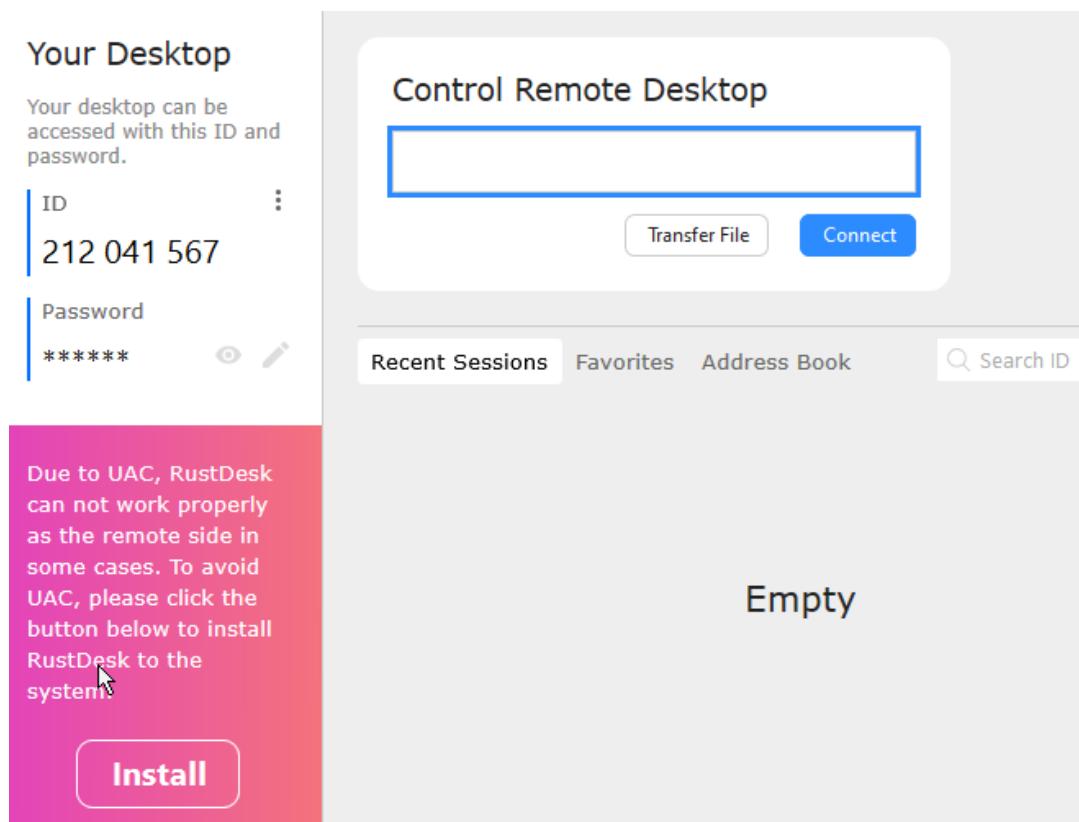

Install

In the new window, the predefined values are usually reasonable. However, it is possible to change these.

Installation

Installation Path: C:\Program Files\RustDesk   Change Path

☑ Create start menu shortcuts

☑ Create desktop icon

End-user license agreement

By starting the installation, you accept the license agreement.

Click on Accept and Install to start the installation.

Cancel   Accept and Install

The program may ask for the Administrator password to continue the installation. This will enable the remotely connected computer to carry out changes on your computer.

Make the program easier to use
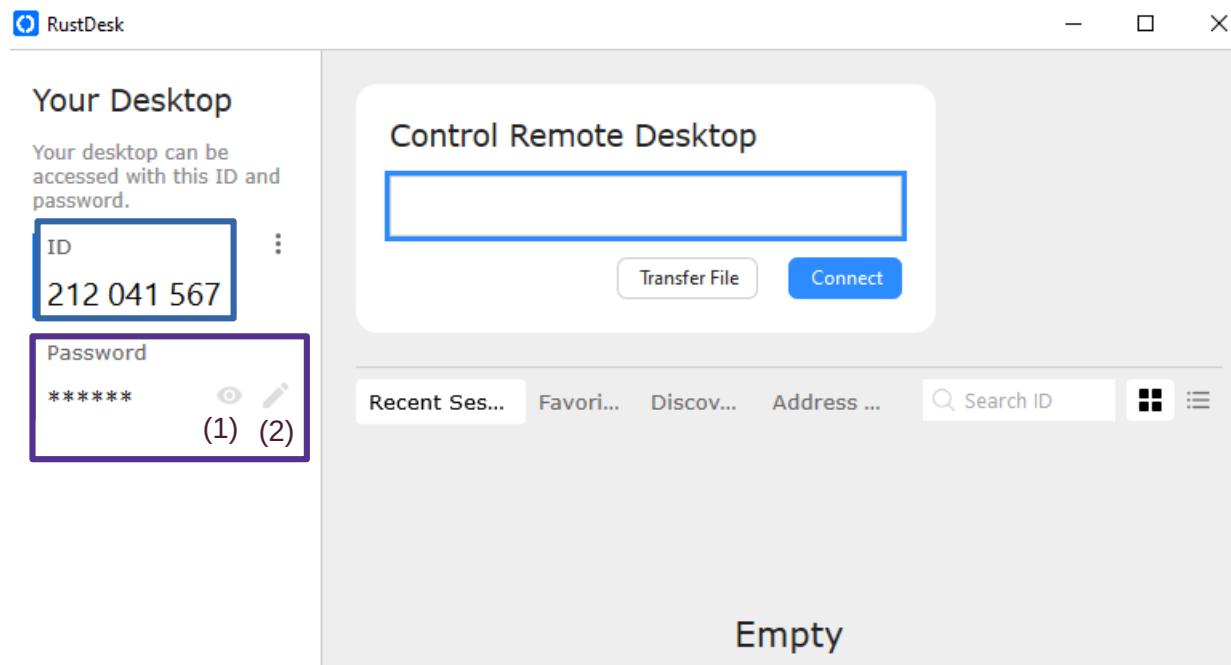

The ID is automatically generated by the program and should not be changed.

Set a static Password

Allowing a remote computer to connect to your PC, it needs to know the ID and password of your RustDesk program.

(1) By default, RustDesk generates a random password. When moving the cursor on the icon, the password becomes visible.

(2) Set your own static password by clicking the pen icon.
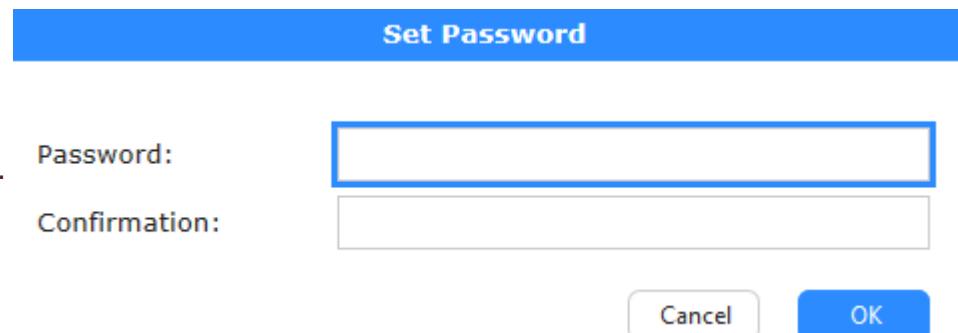

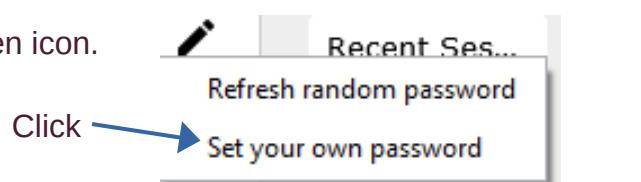

Click

In the new window, enter your own password twice.

Then click on OK

Change language

Clicking on the ⋮ symbol, will open the settings menu.
